As a sign of how much more stable it seems, I've started working on Lightroom again. Lately, I've been trying to edit and output thumbnails in raw or jpegs, so I didn't have a figure for how often I do it. The new Split Tabs feature lets you preview and optimize files in Camera raw and Lightroom, directly in the browser. For example, just type into a search box for one of your RAW files and see if it's there. Clicking the file brings up a preview within the browser and any updates for the file are pulled off the Internet. Being a designer, I've been using Photoshop CS6 since Windows 7 and am a faithful user of the program. But for the past few years, macOS has been claiming more of my time and attention. So as I started adding more and more of my photos to my Lightroom catalog, I was testing out Photoshop CC. I've been toying around with the new feature updates, and I've found a few things of note. First, I'd like to tell you how happy I am that the eponymous Near photograph has returned. In fact, this feature has impressed me so much that I'm going to reinstall the last two versions of my Mac with just Photoshop, as I did with Photoshop CS5 and CS6 before I upgraded to the latest macOS. Now let's not dismiss the new Camera Match feature, which is great for those of us who prefer to shoot with a DSLR camera. But not everyone has the time or the money to lug around a DSLR. There is something to be said about the simplicity of the new Panorama feature and how it can be used to create some serious landscapes from the iPhone, which can then be exported as a Photo Collage. My favorite feature, however, was the new Content-Aware Fill feature. This is useful for when I've shot a picture or a frame and then I want to modify and/or clean up the image in some way. The feature allows me to preview the progress of the editing, and, what's more, allows me to export the edited images.

Photoshop is Adobe's standard image editor. If you work professionally as a UI or UX designer, Adobe Photoshop is the software you should be using. It's also free for personal projects. To get started with Photoshop you'll need to get some experience with photo editing. Photoshop has a large learning curve and you need to know many tools for most basic tasks. You could use Photoshop to retouch your photos or create artwork. There are many different entry-level Photoshop courses for photography. When it comes to designing websites using Photoshop and similar programs, it's really important to understand what you can and cannot do. For example, you can add a drop shadow behind a text element, but you can't add a drop shadow to a box, let alone the entire Photoshop document! In the case of the modern Web, you can't have drop shadows on text but you can have drop shadows on shapes (and even text). So if you want to create a shadow, then you need to use the Clipping Mask layer in Photoshop to create the shadow effect. You can accomplish this by selecting a layer, then under the Layers panel, selecting the Clipping Mask icon, and while holding down the SHIFT key, you can drag it to the document outline unless it is on top. After downloading the software, you will find that there are a number of options you can choose from when it comes to using Photoshop. When you first open Photoshop, you will notice the left-hand side of the screen has a bar across it that will show your motivation. When you use up the motivation, the bar will disappear and you will find that the left-hand side is now blank. In the middle of this blank space, you will see the various buttons that allow for you to work on your images. e3d0a04c9c

I've worked in the Creative Cloud for years with Photoshop, Illustrator, Lightroom and Keynote, but I've got a new creative outlet -- which happens to be professionally. I'm now teaching online, working with students on part time basis. I'm a portal at Envato, and my colleagues and I love learning. When we launch a new tutorial, I'm on the lookout, shopping for access to premium add-ons like Photoshop stock images. Watch my video to see my tools of the trade and which photo add-ons are most useful. I've also got a lot of client work and a regular teaching load that keeps me busy. You won't get the best Photoshop prices while browsing my blog through a third party, but I'm hoping to change that soon. For now you can subscribe to receive an email whenever I post new content.
